FATTRICI

COMPLEMENTARY SPORT HORSE FEED

This horse feed has been studied to give to pregnant mares a complete intake of nutritive substances involved for a good foetus development. In this way, the mare's body will not be depleted and will have a better physical condition during foals' birth. The beginning of the lactation will then be possible without important stressful conditions, giving access to the foal to an abundant quantity of milk since his very first days. To support lactation, the content of some cereals and the calcium dosage is increased.
